NOKIA 100

Simplicity is the key to the Nokia 100.

Just one touch connects you to those frequently dialled numbers such as your home, office or message service. If you need to make an emergency call, simply press the '9' key and you're connected. If you add that to the Nokia user friendly menu system, then you not only have the easiest cellular phone to use on the market but, also the most security conscious.

The Nokia menu system is designed to allow easy access to all the other user friendly features of the Nokia 100 such as 15 numeric memories and a last number stack enabling you to quickly redial any of the last 5 numbers that you have dialled. A call restriction facility is available which avoids unauthorised use of the phone using a PIN code to lock or restrict access to only incoming, memory or easy dial calls.

Other features of the Nokia 100 include speed dialling, a scratchpad memory, anykey answer and last and cumulative timers. The large display provides easy viewing of telephone numbers whilst continuously monitoring signal strength and battery charge.

A retractable antenna means that the Nokia 100 fits easily into your pocket, briefcase, sportsbag or purse.

For ease of use and security at a low cost, the Nokia 100 is designed simply for you.
